                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -GKSKEETLK 808 Claim 4; Page 70-71; 73pp; English.

The present sequence is human G-protein coupled receptor (NGPCR) which is a 7 transmembrane protein of G-protein coupled receptor (GPCR) super family. NGPCR is expressed in hypothalamus, foetal brain, brain, cerebellum and testis. NGPCR spans the cellular membrane and is involved in signal transduction pathways. Human NGPCR is useful for treating obesity, inflammation, immune disorders, diabetes, heart and coronary disease, metabolic disorders and cancer. NGPCR's are also used as reagents in assays for screening compounds that are useful in the therapeutic treatment of physiological and behavioural disorders. NGPCR is useful for identifying compounds that modulate NGPCR gene expression and/or gene product activity. NGPCR NDA is also useful for the diagnostic and prognostic evaluation of disorders related to NGPCR function. Nucleotide constructs encoding functional NGPCR and mutant NGPCR variants are used in gene therapy. NGPCR probes are also useful for the identification, selection and validation of novel molecular targets for drug discovery

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    22;
                                                                                                                       The invention relates to sixty six novel isolated Drosophila melanogaster G-protein coupled receptors (GPCR). The GPCR proteins and nucleic acids are useful in the treatment and diagnosis of GPCR-related conditions. The GPCR proteins and nucleic acids are also useful for identifying modulators of GPCR proteins for use as insecticides. The expression products such as mRNA, AAU38923. AAU38988 represent D. melanogaster G-coupled protein receptor amino acid sequences of

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    69 CLCRKGFYFPDIVSQHKF----FNGSLLEEEYEKLMLGKNSTYNSNSEYECLPCAE 120

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention issell in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present amino acid sequence is an isoform of the human calcium sensing receptor CaSRd, expressed in the kidney. It is a splice variant of the wild type CaSR, that arise from deletion of amino acids 361-465, from the extracellular domain, that comprise acidic residues. It has hypotensive and osteopathic activity. The CaSR isoforms can be used to identify agonists and antagonists that modulate the receptor activity and calcium levels. These modulators are useful for treating hyperparathyroidism or osteoporosis, Paget's disease, hypercalcaemia malignancy or hypertension. The DNA sequence is also useful for altering the CaSR activity and in gene therapy.

Note: This sequence has deletion of amino acids 361-465, according to the sequence shown in the specification, but has been stated as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Calcium Sensing Receptor; CaSRd; isoform; human; splice variant; hypotensive; osteopethic; receptor activity; calcium level; modulator; treatment; hyperparathyroidism; osteoperosis; paget's disease; hypercalcaemia malignancy; hypertension; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ă
                                                                                                                                                                         The invention relates to G-protein fusion receptors (I) comprising:

(1) in the N to C direction, extracellular (ECD), transmembrane (TMD) and intracellular (ICD) domains, each chosen independently from a CaR (altracellular (ICD) domains, each chosen independently from a CaR (calcium receptor), Gluk (metabotropic glutamate receptor) and GABABR (gamma-aminobutyric acid receptor); (2) an optional linker attached to the C-terminus of ICD; and (3) a G-protein (GP) linked to ICD or the Component, are used to assess function of the various domains and to identify compounds (e.g. allosteric modulators or antagonists) that act on these domains. The modulators are potentially useful for treating or preventing diseases associated with the receptors, e.g. stroke, head or spinal cord injury, epilepsy, ischemia, hypodycaemia, anoxia, Alzheimer's disease, hyperparathyroidism, osteoporosis, cognitive disorders and depression. Nucleic acid (II) that encodes (I) is used:

(1) for recombinant production of GABABRR domains, to a binding agent, in a form more like the natural domain structure compared with use of a command of a compared with use of a contains allowed in acking one or more domains. By shuffling different domains, agents can be identified that affect particular domains of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15;

extracellular, transmembrane and intracellular domains similar to CaR, mGluR or GABAB receptor sequences. The G-protein fusion receptors of the invention may also possess a linker joined to the carboxy terminus of the intracellular domain, and a G-protein joined to the linker. The G-protein fusion receptors of the invention are useful for identifying modulators of CaR, mGluR and GABABR for use in treating associated conditions. The present amino acid sequence was used in the production of the invention.

The Invention retarders to o'protein tuston receptors (1) comprising:

Intracellular (ICD) domains, each chosen independently from a CaR (calcium receptor), diuR (metabotropic glutamate receptor) and GABABR (gamma-aminobutric acid receptor); (2) an optional linker attached to the C-terminus of ICD; and (3) a G-protein (GP) linked to ICD or the Cinker. (1), and recombinant chimeric receptors (GR) without the GP component, are used to assess function of the various domains and to identify compounds (e.g. allosteric modulators or antagonists) that act on these domains. The modulators are potentially useful for treating or preventing diseases associated with the receptors, e.g. stroke, head or spinal cord injury, epilepsy, ischemia, apposlycaemia, anoxia, Alzheimer's disease, hyperparathyroidism, osteoporosis, cognitive classion. Nucleic acid (II) that encodes (I) is used:

(1) for recombinant production of corresponding proteins; and (2) to produce cells used in screening for modulators. Use of CaR and mGluR domains allows presentation of GABABR domains, to a binding agent, in a common like the natural domain structure compared with use of incomplete receptors, lacking one or more domains. By shuffling different domains, agents can be identified that affect particular domains of a
                                                                                                                                                                                                                                                                                                                                                                                                      New G-protein fusion receptors and chimeras containing domains from different receptors, used to screen for modulators, potentially useful e.g. for treating or preventing stroke or Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SQVFFDEC---GDLVGNYSIINWHLSPEDGSIVFKEVGY---YNVYAKKGERLFINEEK 527

```
The invention comprises G-protein fusion receptors - comprising extracellular, transmembrane and intracellular domains similar to CaR, mGluR or GABAB receptor sequences. The G-protein fusion receptors of the invention may also possess a linker joined to the carboxy terminus of the intracellular domain, and a G-protein joined to the linker. The G-protein fusion receptors of the invention are useful for identifying modulators of CaR, mGluR and GABABR for use in treating associated conditions. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present amino acid sequence was used in the production of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel G-protein fusion receptor, useful for identifying modulators of CaR, mGluR and GABABR, comprises G-protein joined to the intracellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hyperparathyroidism or osteoporosis, Paget's disease, hypercalcaemia malignancy or hypertension. The DNA sequence is also useful for altering the CaSR activity and in gene therapy.

Note: This sequence has deletion of amino acids 361-537, according to the sequence shown in the specification, but has been stated as 358-536 in the claims. This sequence is not found in the specification but has been constructed from the human CaSR sequence (Seq ID.No.12)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present amino acid sequence is an isoform of the human calcium sensing receptor CaSR, expressed in the kidney. It is a splice variant of the wild type CaSR, that arise from deletion of amino acids 301-537, from the extractellular domain, that comprise acidic residues. It has hypotensive and osteopathic activity. The CaSR isoforms can be used to identify agonists and antagonists that modulate the receptor activity and calcium levels. These modulators are useful for treating
                                                                                                                                                                                           Calcium Sensing Receptor; CaSR; isoform; human; splice variant; hypotensive, osteopethic; receptor activity; calcium level; modulator; treatment; hyperparathyroidism; osteopenosis; paget's disease; hypercalcaemia malignancy; hypertension; gene therapy.

This invention describes a novel polypeptide (I), functioning as a gamma-aminobutyric acid -B (GABA-B) receptor which has insecticidal activity. (I), also the nuclaic acid (II) that encodes it and related vectors, host cells, antibodies and transgenic invertebrates, are used for identifying: (i) new plant protection agents, i.e. modulators of (I) with insecticidal activity, which may also be useful in human or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New invertebrate gamma-aminobutyric acid receptor proteins, useful in screening for potential insecticides, for plant protection or medicine, also related nucleic acid -

This protein comprises dogfish shark kidney calcium receptor related protein (SKCaR-RP), an aquatic polyvalent cation-sensing receptor (PVCR). Its amino acid sequence was deduced from a kidney cDNA clone (see ANT8990). It shows 74% homology to rat kidney cDNA clone (see ANT8990). It shows 74% homology to rat kidney prove and bowine parathyroid PVCR and possesses general features that are homologous to PVCR proteins, including a large extracellular domain. Also claimed are: an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR, and a method of screening for aquatic PVCR activates or inhibits aquatic PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                234 LHR-----RGDNQGPRGLGHSWR----RKDGL----GGDKSHFKWSPPYLECENGS 276

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Grotein-coupled glutamate receptor - rat
C;Species: Rattus norvegicus (Norway rat)
C;Accession: A41939; 815362
R;Houamed, K.M.; Kuijper, J.L.; Gilbert, T.L.; Haldeman, B.A.; O'Hara, P.J.; Mulvihil
S;Glence 252, 1318-1321, 1991
A;Title: Cloning, expression, and gene structure of a G protein-coupled glutamate rec
A;Reference number: A41939; MUD:92022526; PMID:1656524
A;Accession: A41939
A;Status: pre-liminary; not compared with conceptual translation
A;Molecule type: nucleic acid
A;Residues: 1-1199 <HGOT9
A;Residues: 1-1199 <HGOT9

A; Molecule type: mRNA
A; Residues: 1-879 <TAN>
A; Experimental source: brain
C; Comment: This protein is coupled to a G protein and evokes a variety of functions b C; Superfamily: metabotropic glutamate receptor 4
C; Keywords: G protein-coupled receptor; glycoprotein; phosphoprotein; transmembrane predicted <SIG>
E; 23-879/Product: metabotropic glutamate receptor 3 #status predicted <MET>
F; 517-599/Domain: transmembrane #status predicted <TRI>
F; 644-664/Domain: transmembrane #status predicted <III>
F; 645-650/Domain: transmembrane #status predicted <III>
F; 689-709/Domain: transmembrane #status predicted <IIV>
F; 804-828/Domain: transmembrane #status predicted <IIV>
F; 804-828/Domain: transmembrane #status predicted <III>
F; 804-828/Domain: transmembrane #status predicted <IIII>
F; 804-828/Domain: transmembrane #status predicted <IVIII>
F; 804-828/Domain: transmembrane #status predicted <IVIII->
F; 805-829-82414, 439/Binding site: phosphate (Ser) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C;Species: Rattus norvegicus (Norway rat)
